Elimination of Connectives

In classical propositional logic, the connectives $\equiv$, $\lor$, $\neg$ can be replaced by $\rightarrow$, $\land$, $\text{False}$. Define corresponding simplification rules as lemmas and prove their correctness. (You may use automated proof tactics.)

What is the result of your translation for the formula $A \lor (B \land C) = A$? (You can use Isabelle's simplifier to compute the result by using the simplifier’s only option.)
