Definition 1.1. Let A, B be classes.

$$A \triangle B = (A \cup B) \setminus (A \cap B).$$

Let the symmetric difference of A and B stand for $A \triangle B$.

FOUNDATIONS_03_4886447211413504

Proposition 1.2. Let A, B be classes. Then

$$A \triangle B = (A \setminus B) \cup (B \setminus A).$$

Proof. Let us show that $A \triangle B \subseteq (A \setminus B) \cup (B \setminus A)$. Let $u \in A \triangle B$. Then $u \in A \cup B$ and $u \notin A \cap B$. Hence $(u \in A \text{ or } u \in B)$ and not $(u \in A \text{ and } u \in B)$. Thus $(u \in A \text{ or } u \in B)$ and $(u \notin A \text{ or } u \notin B)$. Therefore if $u \in A$ then $u \notin B$. If $u \in B$ then $u \notin A$. Then we have $(u \in A \text{ and } u \notin B)$ or $(u \in B \text{ and } u \notin A)$. Hence $u \in A \setminus B$ or

$u \in B \setminus A$. Thus $u \in (A \setminus B) \cup (B \setminus A)$. End.

Let us show that $((A \setminus B) \cup (B \setminus A)) \subseteq A \triangle B$. Let $u \in (A \setminus B) \cup (B \setminus A)$. Then $(u \in A \text{ and } u \notin B) \text{ or } (u \in B \text{ and } u \notin A)$. If $u \in A$ and $u \notin B$ then $u \in A \cup B$ and $u \notin A \cap B$. If $u \in B$ and $u \notin A$ then $u \in A \cup B$ and $u \notin A \cap B$. Hence $u \in A \cup B$ and $u \notin A \cap B$. Thus $u \in (A \cup B) \setminus (A \cap B) = A \triangle B$. End. \square

Proposition 1.4. Let A, B, C be classes. Then

$$(A \triangle B) \triangle C = A \triangle (B \triangle C).$$

Proof. Take a class X such that $X = (((A \setminus B) \cup (B \setminus A)) \setminus C) \cup (C \setminus ((A \setminus B) \cup (B \setminus A)))$.

Take a class Y such that $Y = (A \setminus ((B \setminus C) \cup (C \setminus B))) \cup (((B \setminus C) \cup (C \setminus B)) \setminus A)$.

We have $A \triangle B = (A \setminus B) \cup (B \setminus A)$ and $B \triangle C = (B \setminus C) \cup (C \setminus B)$. Hence $(A \triangle B) \triangle C = X$ and $A \triangle (B \triangle C) = Y$.

Let us show that (I) $X \subseteq Y$. Let $x \in X$.

(I 1) Case $x \in ((A \setminus B) \cup (B \setminus A)) \setminus C$. Then $x \notin C$.

(I 1a) Case $x \in A \setminus B$. Then $x \notin B \setminus C$ and $x \notin C \setminus B$. $x \in A$. Hence $x \in A \setminus ((B \setminus C) \cup (C \setminus B))$. Thus $x \in Y$. End.

(I 1b) Case $x \in B \setminus A$. Then $x \in B \setminus C$. Hence $x \in (B \setminus C) \cup (C \setminus B)$. $x \notin A$. Thus $x \in ((B \setminus C) \cup (C \setminus B)) \setminus A$. Therefore $x \in Y$. End. End.

(I 2) Case $x \in C \setminus ((A \setminus B) \cup (B \setminus A))$. Then $x \in C$. $x \notin A \setminus B$ and $x \notin B \setminus A$. Hence

not $(x \in A \setminus B \text{ or } x \in B \setminus A)$. Thus not $((x \in A \text{ and } x \notin B) \text{ or } (x \in B \text{ and } x \notin A))$. Therefore $(x \notin A \text{ or } x \in B)$ and $(x \notin B \text{ or } x \in A)$.

(I 2a) Case $x \in A$. Then $x \in B$. Hence $x \notin (B \setminus C) \cup (C \setminus B)$. Thus $x \in A \setminus ((B \setminus C) \cup (C \setminus B))$. Therefore $x \in Y$. End.

(I 2b) Case $x \notin A$. Then $x \notin B$. Hence $x \in C \setminus B$. Thus $x \in (B \setminus C) \cup (C \setminus B)$. Therefore $x \in ((B \setminus C) \cup (C \setminus B)) \setminus A$. Then we have $x \in Y$. End. End. End.

Let us show that (II) $Y \subseteq X$. Let $y \in Y$.

(II 1) Case $y \in A \setminus ((B \setminus C) \cup (C \setminus B))$. Then $y \in A$. $y \notin B \setminus C$ and $y \notin C \setminus B$. Hence not $(y \in B \setminus C \text{ or } y \in C \setminus B)$. Thus not $((y \in B \text{ and } y \notin C) \text{ or } (y \in C \text{ and } y \notin B))$. Therefore $(y \notin B \text{ or } y \in C)$ and $(y \notin C \text{ or } y \in B)$.

(II 1a) Case $y \in B$. Then $y \in C$. $y \notin A \setminus B$ and $y \notin B \setminus A$. Hence $y \notin (A \setminus B) \cup (B \setminus A)$. Thus $y \in C \setminus ((A \setminus B) \cup (B \setminus A))$. Therefore $y \in X$. End.

(II 1b) Case $y \notin B$. Then $y \notin C$. $y \in A \setminus B$. Hence $y \in (A \setminus B) \cup (B \setminus A)$. Thus $y \in ((A \setminus B) \cup (B \setminus A)) \setminus C$. Therefore $y \in X$. End. End.

(II 2) Case $y \in ((B \setminus C) \cup (C \setminus B)) \setminus A$. Then $y \notin A$.

(II 2a) Case $y \in B \setminus C$. Then $y \in B \setminus A$. Hence $y \in (A \setminus B) \cup (B \setminus A)$. Thus $y \in ((A \setminus B) \cup (B \setminus A)) \setminus C$. Therefore $y \in X$. End.

(II 2b) Case $y \in C \setminus B$. Then $y \in C$. $y \notin A \setminus B$ and $y \notin B \setminus A$. Hence $y \notin (A \setminus B) \cup (B \setminus A)$. Thus $y \in C \setminus ((A \setminus B) \cup (B \setminus A))$. Therefore $y \in X$. End. End. End. \square

Distributivity

FOUNDATIONS_03_4119141910839296

Proposition 1.5. Let A, B, C be classes. Then

$$A \cap (B \triangle C) = (A \cap B) \triangle (A \cap C).$$

Proof. $A \cap (B \triangle C) = A \cap ((B \setminus C) \cup (C \setminus B)) = (A \cap (B \setminus C)) \cup (A \cap (C \setminus B)).$

$A \cap (B \setminus C) = (A \cap B) \setminus (A \cap C). \quad A \cap (C \setminus B) = (A \cap C) \setminus (A \cap B).$

Hence $A \cap (B \triangle C) = ((A \cap B) \setminus (A \cap C)) \cup ((A \cap C) \setminus (A \cap B)) = (A \cap B) \triangle (A \cap C).$ \square

Miscellaneous rules

Proposition 1.6. Let A, B be classes. Then

$$A \subseteq B \quad \text{iff} \quad A \triangle B = B \setminus A.$$

Proof. Case $A \subseteq B$. Then $A \cup B = B$ and $A \cap B = A$. Hence the thesis. End.

Case $A \triangle B = B \setminus A$. Let $a \in A$. Then $a \notin B \setminus A$. Hence $a \notin A \triangle B$. Thus $a \notin A \cup B$ or $a \in A \cap B$. Indeed $A \triangle B = (A \cup B) \setminus (A \cap B)$. If $a \notin A \cup B$ then we have a contradiction. Therefore $a \in A \cap B$. Then we have the thesis. End. \square

FOUNDATIONS_03_4490230937681920

Proposition 1.7. Let A, B, C be classes. Then

$$A \triangle B = A \triangle C \quad \text{iff} \quad B = C.$$

Proof. Case $A \triangle B = A \triangle C$.

Let us show that $B \subseteq C$. Let $b \in B$.

Case $b \in A$. Then $b \notin A \triangle B$. Hence $b \notin A \triangle C$. Therefore $b \in A \cap C$. Indeed $A \triangle C = (A \cup C) \setminus (A \cap C)$. Hence $b \in C$. End.

Case $b \notin A$. Then $b \in A \triangle B$. Indeed $b \in A \cup B$ and $b \notin A \cap B$. Hence $b \in A \triangle C$. Thus $b \in A \cup C$ and $b \notin A \cap C$. Therefore $b \in A$ or $b \in C$. Then we have the thesis. End. End.

Let us show that $C \subseteq B$. Let $c \in C$.

Case $c \in A$. Then $c \notin A \triangle C$. Hence $c \notin A \triangle B$. Therefore $c \in A \cap B$. Indeed $c \notin A \cup B$ or $c \in A \cap B$. Hence $c \in B$. End.

Case $c \notin A$. Then $c \in A \triangle C$. Indeed $c \in A \cup C$ and $c \notin A \cap C$. Hence $c \in A \triangle B$. Thus $c \in A \cup B$ and $c \notin A \cap B$. Therefore $c \in A$ or $c \in B$. Then we have the thesis. End. End. End. \square

FOUNDATIONS_03_4578696040022016

Proposition 1.8. Let A be a class. Then

$$A \triangle A = \emptyset.$$

Proof. $A \triangle A = (A \cup A) \setminus (A \cap A) = A \setminus A = \emptyset.$

□

FOUNDATIONS_03_6698730398941184

Proposition 1.9. Let A be a class. Then

$$A \triangle \emptyset = A.$$

Proof. $A \triangle \emptyset = (A \cup \emptyset) \setminus (A \cap \emptyset) = A \setminus \emptyset = A.$

□

FOUNDATIONS_03_6111806917443584

Proposition 1.10. Let A, B be classes. Then

$$A = B \quad \text{iff} \quad A \triangle B = \emptyset.$$

Proof. Case $A = B$. Then $A \triangle B = (A \cup A) \setminus (A \cap A) = A \setminus A = \emptyset$. Hence the thesis. End.

Case $A \triangle B = \emptyset$. Then $(A \cup B) \setminus (A \cap B)$ is empty. Hence every element of $A \cup B$ is an element of $A \cap B$. Thus for all objects u if $u \in A$ or $u \in B$ then $u \in A$ and $u \in B$. Therefore every element of A is an element of B . Every element of B is an element of A . Then we have the thesis. End. □
