**Definition 1.1.** Let  $A, B$  be classes.  $A$  is equinumerous to  $B$  iff there exists a bijection between  $A$  and  $B$ .

FOUNDATIONS\_13\_3703161885818880

**Proposition 1.2.** Let  $A$  be a class. Then  $A$  is equinumerous to  $A$ .

*Proof.*  $\text{id}_A$  is a bijection between  $A$  and  $A$ . □

FOUNDATIONS\_13\_8050301789536256

**Proposition 1.3.** Let  $A, B$  be classes. If  $A$  and  $B$  are equinumerous then  $B$  and  $A$  are equinumerous.

*Proof.* Assume that  $A$  and  $B$  are equinumerous. Take a bijection  $f$  between  $A$  and  $B$ . Then  $f^{-1}$  is a bijection between  $B$  and  $A$ . Hence  $B$  and  $A$  are equinumerous. □

FOUNDATIONS\_13\_3609912414306304

**Proposition 1.4.** Let  $A, B, C$  be classes. If  $A$  and  $B$  are equinumerous and  $B$  and  $C$  are equinumerous then  $A$  and  $C$  are equinumerous.

*Proof.* Assume that  $A$  and  $B$  are equinumerous and  $B$  and  $C$  are equinumerous. Take a bijection  $f$  between  $A$  and  $B$  and a bijection  $g$  between  $B$  and  $C$ . Then  $g \circ f$  is a bijection between  $A$  and  $C$ . Hence  $A$  and  $C$  are equinumerous.  $\square$

FOUNDATIONS\_13\_1913663275401216

**Theorem 1.5 (Cantor-Schröder-Bernstein).** Let  $x, y$  be sets. Then  $x$  and  $y$  are equinumerous iff there exists an injective map from  $x$  to  $y$  and there exists an injective map from  $y$  to  $x$ .

*Proof.* Case  $x$  and  $y$  are equinumerous. Take a bijection  $f$  between  $x$  and  $y$ . Then  $f^{-1}$  is a bijection between  $y$  and  $x$ . Hence  $f$  is an injective map from  $x$  to  $y$  and  $f^{-1}$  is an injective map from  $y$  to  $x$ . End.

Case there exists an injective map from  $x$  to  $y$  and there exists an injective map from  $y$  to  $x$ . Take an injective map  $f$  from  $x$  to  $y$ . Take an injective map  $g$  from  $y$  to  $x$ . We have  $y \setminus f[a] \subseteq y$  for any  $a \in \mathcal{P}(x)$ .

(1) Define  $h(a) = x \setminus g[y \setminus f[a]]$  for  $a \in \mathcal{P}(x)$ .

$h$  is a map from  $\mathcal{P}(x)$  to  $\mathcal{P}(x)$ . Indeed  $h(a)$  is a subset of  $x$  for each subset  $a$  of  $x$ .

Let us show that  $h$  is subset preserving. Let  $u, v$  be subsets of  $x$ . Assume  $u \subseteq v$ . Then  $f[u] \subseteq f[v]$ . Hence  $y \setminus f[v] \subseteq y \setminus f[u]$ . Thus  $g[y \setminus f[v]] \subseteq g[y \setminus f[u]]$ . Indeed  $y \setminus f[v]$  and  $y \setminus f[u]$  are subsets of  $y$ . Therefore  $x \setminus g[y \setminus f[u]] \subseteq x \setminus g[y \setminus f[v]]$ . Consequently  $h[u] \subseteq h[v]$ . End.

Hence we can take a fixed point  $c$  of  $h$  (by theorem 12.4).

(2) Define  $F(u) = f(u)$  for  $u \in c$ .

We have  $c = h(c)$  iff  $x \setminus c = g[y \setminus f[c]]$ .  $g^{-1}$  is a bijection between  $\text{range}(g)$  and  $y$ . Thus  $x \setminus c = g[y \setminus f[c]] \subseteq \text{range}(g)$ . Therefore  $x \setminus c$  is a subset of  $\text{dom}(g^{-1})$ .

(3) Define  $G(u) = g^{-1}(u)$  for  $u \in x \setminus c$ .

$F$  is a bijection between  $c$  and  $\text{range}(F)$ .  $G$  is a bijection between  $x \setminus c$  and  $\text{range}(G)$ .

Define

$$H(u) = \begin{cases} F(u) & : u \in c \\ G(u) & : u \notin c \end{cases}$$

for  $u \in x$ .

Let us show that  $H$  is a map to  $y$ .  $\text{dom}(H)$  is a set and every value of  $H$  is an object.

Hence  $H$  is a map.

Let us show that every value of  $H$  lies in  $y$ . Let  $v$  be a value of  $H$ . Take  $u \in x$  such that  $H(u) = v$ . If  $u \in c$  then  $v = H(u) = F(u) = f(u) \in y$ . If  $u \notin c$  then  $v = H(u) = G(u) = g^{-1}(u) \in y$ . End. End.

(4)  $H$  is surjective onto  $y$ . Indeed we can show that every element of  $y$  is a value of  $H$ . Let  $v \in y$ .

Case  $v \in f[c]$ . Take  $u \in c$  such that  $f(u) = v$ . Then  $F(u) = v$ . End.

Case  $v \notin f[c]$ . Then  $v \in y \setminus f[c]$ . Hence  $g(v) \in g[y \setminus f[c]]$ . Thus  $g(v) \in x \setminus h(c)$ . We have  $g(v) \in x \setminus c$ . Therefore we can take  $u \in x \setminus c$  such that  $G(u) = v$ . Then  $v = H(u)$ . End. End.

(5)  $H$  is injective. Indeed we can show that for all  $u, v \in x$  if  $u \neq v$  then  $H(u) \neq H(v)$ . Let  $u, v \in x$ . Assume  $u \neq v$ .

Case  $u, v \in c$ . Then  $H(u) = F(u)$  and  $H(v) = F(v)$ . We have  $F(u) \neq F(v)$ . Hence  $H(u) \neq H(v)$ . End.

Case  $u, v \notin c$ . Then  $H(u) = G(u)$  and  $H(v) = G(v)$ . We have  $G(u) \neq G(v)$ . Hence  $H(u) \neq H(v)$ . End.

Case  $u \in c$  and  $v \notin c$ . Then  $H(u) = F(u)$  and  $H(v) = G(v)$ . Hence  $v \in g[y \setminus f[c]]$ . We have  $G(v) \in y \setminus f[c]$ . Thus  $G(v) \neq F(u)$ . End.

Case  $u \notin c$  and  $v \in c$ . Then  $H(u) = G(u)$  and  $H(v) = F(v)$ . Hence  $u \in g[y \setminus f[c]]$ . We have  $G(u) \in y \setminus f[c]$ . Thus  $G(u) \neq F(v)$ . End. End.

Consequently  $H$  is a bijection between  $x$  and  $y$  (by 4, 5). Therefore  $x$  and  $y$  are equinumerous. End.  $\square$
