Some results of number theory

Jeremy Avigad
David Gray
Adam Kramer
Thomas M Rasmussen

April 19, 2009

Abstract

This is a collection of formalized proofs of many results of number theory. The proofs of the Chinese Remainder Theorem and Wilson's Theorem are due to Rasmussen. The proof of Gauss's law of quadratic reciprocity is due to Avigad, Gray and Kramer. Proofs can be found in most introductory number theory textbooks; Goldman's *The Queen of Mathematics: a Historically Motivated Guide to Number Theory* provides some historical context.

Avigad, Gray and Kramer have also provided library theories dealing with finite sets and finite sums, divisibility and congruences, parity and residues. The authors are engaged in redesigning and polishing these theories for more serious use. For the latest information in this respect, please see the web page http://www.andrew.cmu.edu/~avigad/isabelle. Other theories contain proofs of Euler's criteria, Gauss' lemma, and the law of quadratic reciprocity. The formalization follows Eisenstein's proof, which is the one most commonly found in introductory textbooks; in particular, it follows the presentation in Niven and Zuckerman, *The Theory of Numbers*.

To avoid having to count roots of polynomials, however, we relied on a trick previously used by David Russinoff in formalizing quadratic reciprocity for the Boyer-Moore theorem prover; see Russinoff, David, "A mechanical proof of quadratic reciprocity," *Journal of Automated Reasoning* 8:3-21, 1992. We are grateful to Larry Paulson for calling our attention to this reference.

1 The Fibonacci function

theory *Fib*
imports *Primes*
begin

Fibonacci numbers: proofs of laws taken from: R. L. Graham, D. E. Knuth, O. Patashnik. Concrete Mathematics. (Addison-Wesley, 1989)

fun *fib* :: *nat* ⇒ *nat*
where
  fib 0 = 0
| *fib (Suc 0) = 1*
| *fib-2*: *fib (Suc (Suc n)) = fib n + fib (Suc n)*

The difficulty in these proofs is to ensure that the induction hypotheses are applied before the definition of *fib*. Towards this end, the *fib* equations are not declared to the Simplifier and are applied very selectively at first.

We disable *fib.fib-2fib-2* for simplification ...

declare *fib-2* [*simp del*]

...then prove a version that has a more restrictive pattern.

lemma *fib-Suc3*: *fib (Suc (Suc (Suc n))) = fib (Suc n) + fib (Suc (Suc n))*
  ⟨*proof*⟩

Concrete Mathematics, page 280

lemma *fib-add*: *fib (Suc (n + k)) = fib (Suc k) * fib (Suc n) + fib k * fib n*
⟨*proof*⟩

lemma *fib-Suc-neq-0*: *fib (Suc n) ≠ 0*
  ⟨*proof*⟩

lemma *fib-Suc-gr-0*: *0 < fib (Suc n)*
  ⟨*proof*⟩

lemma *fib-gr-0*: *0 < n ==> 0 < fib n*
  ⟨*proof*⟩

Concrete Mathematics, page 278: Cassini's identity. The proof is much easier using integers, not natural numbers!

lemma *fib-Cassini-int*:
 *int (fib (Suc (Suc n)) * fib n) =*
  *(if n mod 2 = 0 then int (fib (Suc n) * fib (Suc n)) − 1*
   *else int (fib (Suc n) * fib (Suc n)) + 1)*
⟨*proof*⟩

We now obtain a version for the natural numbers via the coercion function *int*.

theorem *fib-Cassini*:
fib (*Suc* (*Suc n*)) * *fib n* =
(*if n mod 2* = *0 then fib* (*Suc n*) * *fib* (*Suc n*) − *1*
else fib (*Suc n*) * *fib* (*Suc n*) + *1*)
⟨*proof*⟩

Toward Law 6.111 of Concrete Mathematics

lemma *gcd-fib-Suc-eq-1*: *gcd* (*fib n*) (*fib* (*Suc n*)) = *Suc 0*
⟨*proof*⟩

lemma *gcd-fib-add*: *gcd* (*fib m*) (*fib* (*n* + *m*)) = *gcd* (*fib m*) (*fib n*)
⟨*proof*⟩

lemma *gcd-fib-diff*: *m* ≤ *n* ==> *gcd* (*fib m*) (*fib* (*n* − *m*)) = *gcd* (*fib m*) (*fib n*)
⟨*proof*⟩

lemma *gcd-fib-mod*: *0* < *m* ==> *gcd* (*fib m*) (*fib* (*n mod m*)) = *gcd* (*fib m*) (*fib n*)
⟨*proof*⟩

lemma *fib-gcd*: *fib* (*gcd m n*) = *gcd* (*fib m*) (*fib n*) — Law 6.111
⟨*proof*⟩

theorem *fib-mult-eq-setsum*:
fib (*Suc n*) * *fib n* = (∑ *k* ∈ {..*n*}. *fib k* * *fib k*)
⟨*proof*⟩

end

2 Fundamental Theorem of Arithmetic (unique factorization into primes)

theory *Factorization*

⟨*proof*⟩

lemma *primel-hd-tl*: *(primel (x # xs)) = (prime x ∧ primel xs)*
⟨*proof*⟩

lemma *primes-eq*: *prime p ==> prime q ==> p dvd q ==> p = q*
⟨*proof*⟩

lemma *primel-one-empty*: *primel xs ==> prod xs = Suc 0 ==> xs = []*
⟨*proof*⟩

lemma *prime-g-one*: *prime p ==> Suc 0 < p*
⟨*proof*⟩

lemma *prime-g-zero*: *prime p ==> 0 < p*
⟨*proof*⟩

lemma *primel-nempty-g-one*:
primel xs ⟹ xs ≠ [] ⟹ Suc 0 < prod xs
⟨*proof*⟩

lemma *primel-prod-gz*: *primel xs ==> 0 < prod xs*
⟨*proof*⟩

2.4 Sorting

lemma *nondec-oinsert*: *nondec xs ⟹ nondec (oinsert x xs)*
⟨*proof*⟩

lemma *nondec-sort*: *nondec (sort xs)*
⟨*proof*⟩

lemma *x-less-y-oinsert*: *x ≤ y ==> l = y # ys ==> x # l = oinsert x l*
⟨*proof*⟩

lemma *nondec-sort-eq* [*rule-format*]: *nondec xs ⟶ xs = sort xs*
⟨*proof*⟩

lemma *oinsert-x-y*: *oinsert x (oinsert y l) = oinsert y (oinsert x l)*

⟨*proof*⟩

2.5 Permutation

lemma *perm-primel* [*rule-format*]: *xs* <~~> *ys* ==> *primel xs* −−> *primel ys*
⟨*proof*⟩

lemma *perm-prod*: *xs* <~~> *ys* ==> *prod xs* = *prod ys*
⟨*proof*⟩

lemma *perm-subst-oinsert*: *xs* <~~> *ys* ==> *oinsert a xs* <~~> *oinsert a ys*
⟨*proof*⟩

lemma *perm-oinsert*: *x* # *xs* <~~> *oinsert x xs*
⟨*proof*⟩

lemma *perm-sort*: *xs* <~~> *sort xs*
⟨*proof*⟩

lemma *perm-sort-eq*: *xs* <~~> *ys* ==> *sort xs* = *sort ys*
⟨*proof*⟩

2.6 Existence

lemma *ex-nondec-lemma*:
primel xs ==> ∃ *ys*. *primel ys* ∧ *nondec ys* ∧ *prod ys* = *prod xs*
⟨*proof*⟩

lemma *not-prime-ex-mk*:
Suc 0 < *n* ∧ ¬ *prime n* ==>
∃ *m k*. *Suc 0* < *m* ∧ *Suc 0* < *k* ∧ *m* < *n* ∧ *k* < *n* ∧ *n* = *m* ∗ *k*
⟨*proof*⟩

lemma *split-primel*:
primel xs ⟹ *primel ys* ⟹ ∃ *l*. *primel l* ∧ *prod l* = *prod xs* ∗ *prod ys*
⟨*proof*⟩

lemma *factor-exists* [*rule-format*]: *Suc 0* < *n* −−> (∃ *l*. *primel l* ∧ *prod l* = *n*)
⟨*proof*⟩

lemma *nondec-factor-exists*: *Suc 0* < *n* ==> ∃ *l*. *primel l* ∧ *nondec l* ∧ *prod l* = *n*
⟨*proof*⟩

2.7 Uniqueness

lemma *prime-dvd-mult-list* [*rule-format*]:
prime p ==> *p dvd* (*prod xs*) −−> (∃ *m*. *m*:*set xs* ∧ *p dvd m*)
⟨*proof*⟩

lemma *hd-xs-dvd-prod*:
primel (*x* # *xs*) ==> *primel ys* ==> *prod* (*x* # *xs*) = *prod ys*
==> ∃ *m*. *m* ∈ *set ys* ∧ *x dvd m*
⟨*proof*⟩

lemma *prime-dvd-eq*: *primel* (*x* # *xs*) ==> *primel ys* ==> *m* ∈ *set ys* ==> *x dvd m* ==> *x* = *m*
⟨*proof*⟩

lemma *hd-xs-eq-prod*:
primel (*x* # *xs*) ==>
primel ys ==> *prod* (*x* # *xs*) = *prod ys* ==> *x* ∈ *set ys*
⟨*proof*⟩

lemma *perm-primel-ex*:
primel (*x* # *xs*) ==>
primel ys ==> *prod* (*x* # *xs*) = *prod ys* ==> ∃ *l*. *ys* <~~> (*x* # *l*)
⟨*proof*⟩

lemma *primel-prod-less*:
primel (*x* # *xs*) ==>
primel ys ==> *prod* (*x* # *xs*) = *prod ys* ==> *prod xs* < *prod ys*
⟨*proof*⟩

lemma *prod-one-empty*:
primel xs ==> *p* ∗ *prod xs* = *p* ==> *prime p* ==> *xs* = []
⟨*proof*⟩

lemma *uniq-ex-aux*:
∀ *m*. *m* < *prod ys* --> (∀ *xs ys*. *primel xs* ∧ *primel ys* ∧
prod xs = *prod ys* ∧ *prod xs* = *m* --> *xs* <~~> *ys*) ==>
primel list ==> *primel x* ==> *prod list* = *prod x* ==> *prod x* < *prod ys*
==> *x* <~~> *list*
⟨*proof*⟩

lemma *factor-unique* [*rule-format*]:
∀ *xs ys*. *primel xs* ∧ *primel ys* ∧ *prod xs* = *prod ys* ∧ *prod xs* = *n*
--> *xs* <~~> *ys*
⟨*proof*⟩

lemma *perm-nondec-unique*:
xs <~~> *ys* ==> *nondec xs* ==> *nondec ys* ==> *xs* = *ys*
⟨*proof*⟩

theorem *unique-prime-factorization* [*rule-format*]:
∀ *n*. *Suc 0* < *n* --> (∃!*l*. *primel l* ∧ *nondec l* ∧ *prod l* = *n*)
⟨*proof*⟩

end

3 Divisibility and prime numbers (on integers)

theory *IntPrimes*
imports *Main Primes*
begin

The *dvd* relation, GCD, Euclid's extended algorithm, primes, congruences (all on the Integers). Comparable to theory *Primes*, but *dvd* is included here as it is not present in main HOL. Also includes extended GCD and congruences not present in *Primes*.

3.1 Definitions

consts
$xzgcda :: int * int * int * int * int * int * int * int => int * int * int$

recdef *xzgcda*
$measure\ ((\lambda(m, n, r', r, s', s, t', t).\ nat\ r)$
$:: int * int * int * int * int * int * int * int => nat)$
$xzgcda\ (m, n, r', r, s', s, t', t) =$
$(if\ r \leq 0\ then\ (r', s', t')$
$else\ xzgcda\ (m, n, r, r'\ mod\ r,$
$s, s' - (r'\ div\ r) * s,$
$t, t' - (r'\ div\ r) * t))$
